Oracle Payment Interface

CERTIFIED PAYMENTS INSIDE ORACLE OPERA

A direct, certified connection between Oracle Opera and the payment terminal.

iVeri's IndoGo integration with Oracle Payment Interface connects Oracle OPERA (Cloud or On-Premise v5) to the POS Terminal for card-present payments at reception.

KEY BENEFITS

DIRECT CERTIFICATION

iVeri holds direct OPCI certification – a distinction held by only a handful of payment providers globally.

REAL-TIME CONFIRMATION

Payment instructions move from OPERA to the terminal and confirm back in real time.

REDUCED PCI SCOPE

OPI's tokenisation of data details how much sensitive data the hotel's own systems touch.

CENTRALISED VISIBILITY

Transaction history and reporting across every connected property.

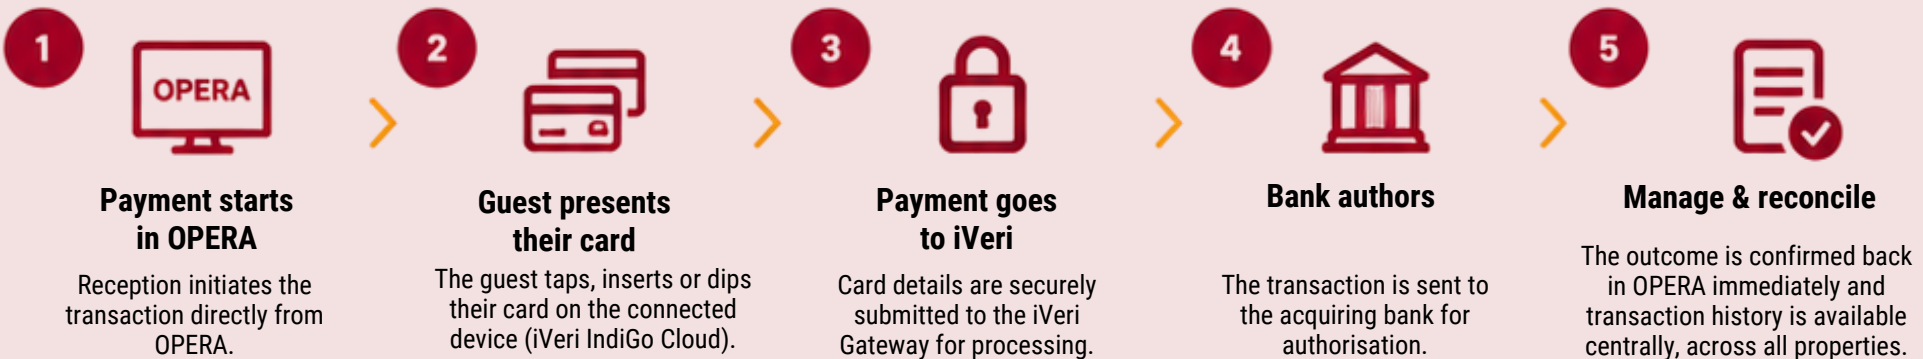

BUILT FOR HOSPITALITY

Designed specifically for hotels using Oracle OPERA Cloud or On-Premise v5.

HOW OPI WORKS

A CERTIFIED PATH FROM OPERA TO THE CARD, AND BACK AGAIN.

PERFECT FOR

Hotels & Resorts

Hotel Groups & Chains

Multi-property Operators

Opera Cloud or On-Premise v5

Pay-At-Reception

THE MERCHANT PROBLEM

Payment is a disconnected step at check-in.

Hotels run reservations and front-desk operations through the OPERA. But payment happens separate, introducing delays, re-keyed amounts and reconciliation headaches, especially across multiple properties.

INTEGRATION LEVEL

MEDIUM – HIGH

A integration project, typically co-ordinated with the hotel's Oracle/Opera implementation team rather than the hotel's own developers.

FOUND AN OPI OPPORTUNITY?

Any hotel group on Oracle OPERA – especially one running several properties – is worth an OPI conversation.
