PROCESS PAYMENTS AT SCALE

Make high-volume payment collection efficient,
on a cycle that suits the business.

Process large volumes of card-not-present
transactions together, instead of one at a time in real
time.

EFFICIENCY. CONTROL. RESULTS.

HANDLES REAL VOLUME

Process many transactions in
one pass, not one at a time.

LESS MANUAL WORK

Remove the need to key in or
authorise each payment
individually.

FITS A BILLING CYCLE

Designed around scheduled
collections – monthly, weekly
or as you need.

CLEAR RECONCILIATION

Full reporting per transaction,
so nothing gets lost in the
batch.

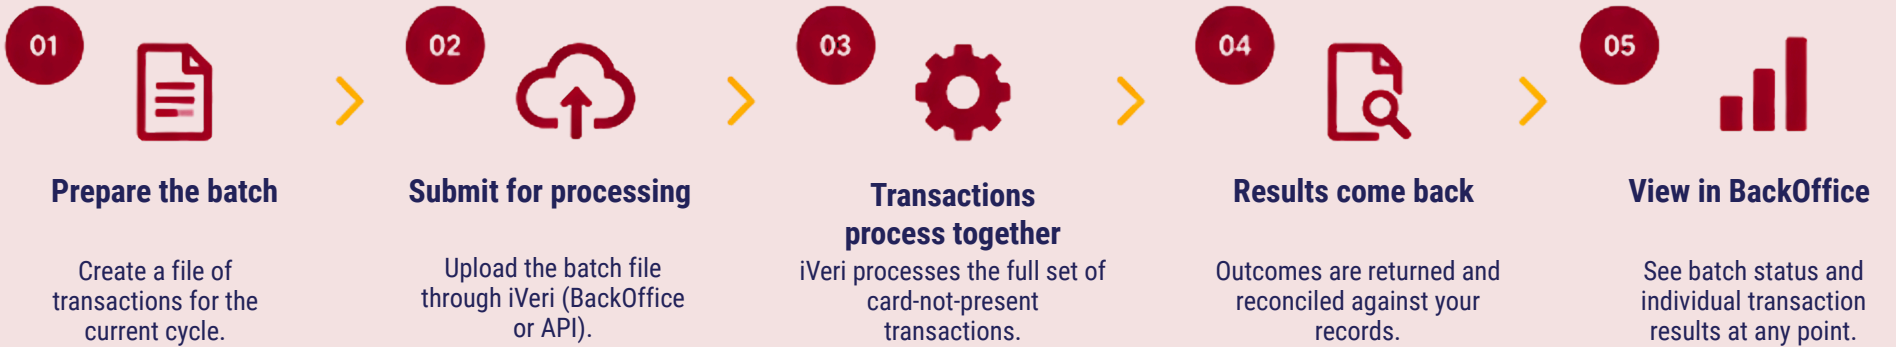

FLEXIBLE PROCESSING

Create batches manually or
upload a file. Set processing
dates to suit your business.

HOW BATCH WORKS

A SIMPLE PROCESS FROM FILE TO RESULTS.

PERFECT FOR

Insurance

Membership
Organisations

Recurring
Payments

High-Volume
Billing

THE MERCHANT PROBLEM

The same payment, from thousands of customers,
every cycle.

The merchant collects a recurring payment – payment for membership fees, subscription – and doing one transaction at a time is slow, manual and error-proof.

INTEGRATION LEVEL

Medium / High

Typically a file-based or API integration to prepare and submit the batch – no custom checkout or card data handling required.

SALES CONVERSATION

Ask your merchant: "How many payments do you collect in a typical cycle?"
