CONNECT PAYMENTS TO THE POINT OF SALE

Connect the till and the payment terminal,
so they work as one system.

Integrate payment processing with the merchant's
existing till environment, for a connected card-present
experience across every lane.

KEY BENEFITS

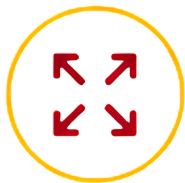

NO RE-KEYING

The amount only needs to be
entered once, on the till.

FEWER RECONCILIATION ERRORS

Sales and payments are
matched automatically, not by
hand.

SCALES ACROSS LANES AND STORES

Built to work consistently
whether it's one terminal or
twenty.

FITS HOSPITALITY PMS TOO

Pairs with the Oracle
Payment Interface for
OPERA environments.

PERFECT FOR

Retail

Hospitality

Parking

Multi-lane sites

HOW IT WORKS

ONE CONNECTED FLOW, FROM SALE TO SETTLEMENT.

1

Integrate with the till

IndGo connects into the
merchant's existing till or
POS software.

2

Till drives the terminal

A sale on the till
automatically triggers the
correct amount on the
connected terminal.

3

Transaction processes

The payment is processed
and the result is passed
straight back to the till.

4

Works across lanes and sites

The same integration works
consistently whether there's
one terminal or many, across
one site or several.

5

Reconciliation happens centrally

Sales and payments
reconcile automatically,
without manual matching at
month-end.

THE MERCHANT PROBLEM

Two disconnected systems, reconciled by hand.

The merchant's till and card machine is used to create systems – staff key in the amount twice, reconciliation is manual, and errors creep in, especially across multiple lanes or stores.

INTEGRATION LEVEL

MEDIUM – HIGH

Typically a POS or PMS-side integration project, coordinated with the merchant's till or property management system vendor.

FOUND AN INDIGO OPPORTUNITY?

Any merchant with a standalone card machine, multiple lanes, or a hotel PMS is worth an IndGo conversation.
