Tap on Phone

TURN AN ANDROID PHONE INTO A CARD MACHINE

Accept card payments with one tap on a compatible Android phone.

A feature inside the mPress app that lets a merchant accept contactless cards using their own phone — no card machine required.

KEY BENEFITS

NO CARD MACHINE COST

The merchant's own phone becomes the acceptance device.

LIVE ALMOST IMMEDIATELY

Sign-up and setup can be done from the app itself.

WORKS ANYWHERE

Take payments on the move, not just at a fixed till.

CERTIFIED SECURE

Approved and certified by major card brands for Tap on Phone.

PERFECT FOR

Informal traders

SMMEs

Beauty & personal care

Mobile services

Market & pop-up traders

HOW IT WORKS

NO HARDWARE, JUST THE APP.

1

Sign up on mPress

Download the mPress app and complete a short application for a merchant account.

2

Enter the amount

Open the app and enter the transaction amount.

3

Select Tap on Phone

Choose the tap-on-phone option in the app.

4

Customer taps to pay

The customer taps their contactless card on the back of the phone, entering a PIN if required.

5

Payment confirms

The transaction processes through the iveri Gateway and is recorded, visible straight away in BackOffice.

THE MERCHANT PROBLEM

Small, informal, or mobile merchants who accept card payments, but the cost of a card machine — or the lack of a fixed stall at all — keeps them cash only and turning away customers.

INTEGRATION LEVEL LOW

An app download and a short sign-up — no hardware purchase, no integration work, and no development effort required.

CARD BRANDS

Found a tap on phone opportunity?

Any merchant who's cash-only because a card machine feels out of reach is worth a Tap on Phone conversation.
